Abstract.
In an increasingly digital era, access to information and digital media has become an important part of everyday life. Developments in the field of communication and technology have opened doors for interacting with media and accessing various source information quickly and easily. In everyday life, gender consideration is important to ensure inclusion, equality, understanding critical issues in the society, gender sensitivity, and its relevance in coping with gender inequality in digital literacy. In this research, qualitative approach is used and participants are individuals from various backgrounds actively using digital media and have information literacy. Thematic approach is used to analyze the collected data. Gender sensitive approach is used to build culture understanding which is critical in the digital era and is a strategic step to overcome complex challenges that appear along with the development of technology. The method described covers gender analysis, education, development curriculum, and gender sensitive content production. However, application method also found this as a problem like uneven accessibility, and there are technical challenges also. This study aims to increase awareness regarding gender sensitivity in digital literacy, to influence the society to work the same cause for gender conscious in the digital era. With the use of this method we can create an environment where people from all gender types can develop skills, participate in various digital media, and can face challenges that arise in the digital era.
