²Bethany Elementary School, Salatiga, Indonesia

Abstract

The lack of elementary student's knowledge and interest about Indonesia's traditional song can affect the existence of traditional songs. Elementary students prefer to listen to modern songs from the device that they have in their daily life. In the music learning process, the student feels bored because of the monotone learning method, even though music art learning process is an important process to promote student knowledge about Indonesia's traditional songs. Innovation is needed because of this condition. For example, is the use of technological devices like mobile device in music art learning. This study aims to design and develop an android role-playing game (RPG) for music learning, especially Indonesia's traditional songs. This study also analyses the worthiness of android RPG game based on expert judgment validation's score. Based on expert judgment validation's score, the music art learning media called “Lagu Nusantara” is worthy of supporting the student to learn about basic of music learning and Indonesia's traditional songs. The average score is 3.6 for media representation, 4 for the material which presented in this game, and 3.3 for the use of language. The worthiness of this media is above 90% (precisely 90.83%). In conclusion, this RPG game can use by teachers or students to promote music art learning process, especially about Indonesia's traditional songs.

Keywords: role-playing game, Android, music art, Indonesia's traditional song

1. Introduction

Music learning process in elementary school aims to make and develop student's character. In the music learning process, the teacher can give moral and cultural value through songs that have provided by the teacher. The existence of music learning in the elementary school allows the teacher to develop student's behavior, attitude, and character since early stage (Mulyono, 2012). Furthermore, an aesthetic sense that trained through music learning is expected to build and develop student's personality to a better way (Wicaksono, 2009).
Music learning in the elementary school is an important process to tell and remind the student about Indonesia’s traditional songs wealth. Furthermore, Indonesia’s traditional songs reflect people’s character who lived in the origin of traditional song (Suharto et al., 2017; Alfianto et al., 2014). Indonesia’s traditional songs have deep moral value and can be learned through the learning process (Indrawan et al., 2016). Some Indonesia’s traditional songs also have spiritual significance as thanks to God (Wijayanto et al., 2015; Septiana et al., 2016).

Based on interview and observation in the music learning process, we found that the aim of music learning was not delivered well to the student. We saw some students were not paying attention to the material that given by their teacher. Students felt bored because a lot of music learning process was delivered by theoretical and directly practice with a musical instrument, not playing songs directly (Kusumadewi et al., 2011). They also more memorized pop or western songs than Indonesia’s traditional songs (Nadir, 2016). Indonesia’s traditional songs become evicted because of foreign cultural influx which affects the way of playing music and singing a song in Indonesia’s society (Sumirat, 2014). Moreover, the lack of introduction of Indonesia’s traditional songs to children since early stage causing less interest of the child to know and learn their traditional songs (Alam et al., 2014).

Based on observation, music learning process in the elementary school perceived less utilize technology device that exists in the class. The teacher will use it if needed. Music learning is focusing on theory and practice wherein theory be basic to do further practical method (Amriyeni et al., 2013). The teacher admitted that the use of technological devices for music learning rarely used. The teacher realized that the lack of utilization of technological tools in the learning process makes students less interested in the learning activity.

2. Literature Review

Today elementary student generation are children who grow in the rapid development of technology. They were accustomed to playing games on their computer, gadget, and other technological devices (Furió et al., 2015). If it used well in the learning process, the use of technological devices not only encourage motivation but also improves student’s positive behaviors (Ciampa, 2014). No findings suggest that using technological devices provides adverse outcomes for learning process (Haßler et al., 2016).

The using of technological devices especially mobile devices for music learning process is an alternative method to address the rapid development of technology. The
teacher explained that use mobile devices for music learning process are needed if viewed from student’s habit who often use mobile devices. Use mobile device in the music learning process is an innovation that can help students to learn and improve student's sense of music (Rahmawan et al., 2016). The teacher also explained that music learning which packed by mobile games especially RPG games could affect student’s interest and motivation in the learning process because it is familiar for them like Mobile Legends game.

RPG or Role-Playing Game is one of games genre which has a storyline and main actor which played by the user (Syaifudin, 2016). Inside this game, some actors cannot play by the user. It is called Non-Player Characters (NPC). NPC in this game helps the lead actor to finish storyline because they are connected each other (Perez, 2016, pp. XXIV). This game also has a connection for each level and story so that students feel challenged to finish the story (Maharani et al., 2016).

Through interview and observation, we found that learning media which packed in mobile games is needed to answer the challenges of information technology, especially in music learning process. From the previous research, Ciampa (2014) found that student could work cooperatively with their friends through mobile learning and increased positive behaviors. The using of mobile devices in learning process also gives positive outcomes for students (Fokides et al., 2016). Makes music learning fun (Wagner, 2017), engage student’s competences in basic music theory (Chung et al., 2017), and increase student’s ability to read music score (Ng et al., 2015) are the advantages of mobile game learning. RPG games in the learning process also worthy to use as learning media (Hikam et al., 2013; Sari et al., 2014; Asriyatun et al., 2014; Maharani et al., 2016; Ningsih et al., 2016).

Music art is a kind of art that accepted by the human sense of hearing (Bahari, 2008, pp. 55). In education process, music art gives experiences for students and to help individual development that can impact on the growth of student’s mind, social, and emotion (Desyandri, 2008, pp. 61). Music art also is a tool that helps students to get better personality and character (Mulyono, 2012). Music art can be delivered by digital media, especially mobile games. If it applied well, digital media gives a lot of advantages (Daryanto, 2013) such as (1) makes message in the learning process clearly, (2) become a solution to overcome the limitations of space, time, energy, and sensory energy owned by teachers or students, (3) increase students interest and motivation, (4) allow students to learn independently.

This study aims to design and develop android RPG game for music learning, especially Indonesia’s traditional song. This study also analyses the worthiness of android
RPG game based on expert judgment validation’s score. This game built with RPG Maker MV software which developed by Kadokawa Games.

3. Material and Method

This study uses research and development method which is used to create and test the effectiveness of the product (Sugiyono, 2015, pp. 407). We used R & D model which design by Branch (2009) with ADDIE (Analyze, Design, Develop, Implement, Evaluate) steps. We develop android RPG games based on “Permendikbud No. 24 Tahun 2016” especially for Indonesia’s traditional songs in the elementary music art learning. We use RPG Maker MV version 1.5.1 to build this game. Our research data obtained from the validation test of material, media, and language. Because of our limitation, we used simple step of ADDIE method and eliminate the “implement” step.

4. Result and Discussion

4.1. Music art learning through mobile games is needed

Student knowledge of Indonesia’s traditional songs was lacked. They prefer to listen to modern songs than traditional songs (Nadir, 2016). Although there is internet access in their school or home, they used internet for entertaining their self like playing games or watching online video (Su & Cheng, 2015). The lack of student’s knowledge about Indonesia’s traditional song also caused by parent habits. For example, parents are often listening to the modern song, and their children learn a song which heard by their parents (Alam et al., 2014). Because of this condition, the teacher wants to teach their students about Indonesia’s traditional song in the music art learning.

The teacher knows that teaching Indonesia’s traditional songs for elementary students is urgently needed. It will develop student’s character from the moral value that conceived by each song (Alfianto et al., 2014; Rosmiati, 2014; Indrawan et al., 2016; Sukoyo, 2017). It also helps students to know and learn Indonesia’s culture (Raharja et al., 2014; Irawan et al., 2014; Yudarta & Pasek, 2017). The teacher also realized that teaching Indonesia’s traditional song is an essential thing. Because of that, the teacher makes every effort to explain it to students through learning innovation. The learning innovation that the teacher did is about the use of the technological device in the learning process. But, the teacher taught that was not enough to increase student’s interest and motivation for learning Indonesia’s traditional songs. Students seem bored
while the teacher explained Indonesia’s traditional song directly. The teacher needs something new to teach it to the student.

Based on student experiences about mobile devices, teacher assumed that mobile devices could help the student to learn Indonesia’s traditional songs. The teacher explained that the use of mobile devices in learning process has a positive and negative effect. But, the teacher trusted that mobile devices could help student well in the music learning process, agreed with Wagner (2017) and Chung et al. (2017) explanations. In addition, adding games in the learning process through mobile devices is a better way to tell students about Indonesia’s traditional songs. The student will be challenging because they can learn while playing a mobile game (Ciampa, 2014).

4.2. Designing and developing android RPG game for music learning

Based on the statement of the music teacher, we designed an Android RPG game for music learning, especially on Indonesia’s traditional song. Our design based on “Permendikbud No. 24 Tahun 2016” and focused on music art learning in the elementary school. This game called “Lagu Nusantara” because the student will play the main actor and adventure through every map. The player will find other people in the different village to learn a lot of Indonesia’s traditional songs. Figure 1 shows the storyline of this game.

This game consists of several parts, such as a welcome screen, menu command, songs, actors, and map. Every part are connected by machine language which is included on RPG Maker MV software.

4.3. Evaluation of android RPG game for music learning

To test the worthiness of our product, we examined this game to the expert. We choose three expert judgment that consists of learning media expert, music art learning expert, and language expert. The media expert is Adiroyanto Juliastomo Gundo, S.Si., M.Pd., lecturer of Faculty of Information Technology, Universitas Kristen Satya Wacana. The music art learning expert is Iwan Tri Yulianto, music teacher at Bethany Elementary School. The language expert is Dr. Sunardi, S.Pd., M.Pd., lecturer of Faculty of Teacher Training and Education, Universitas Kristen Satya Wacana.

From the learning media expert score, the Android RPG game that we designed obtained 3.6 for an average score. This score category is perfectly worthy for music
learning based on conversion score (Purwanto, 2013, pp. 104). The music art learning expert gave a perfect score for this game. The average score is 4. Then, from the language expert score, this game obtained 3.3 for an average score which score category is worthy. A detailed score of this product shows in Table 1.

Figure 1: Flowchart of The Storyline.
From the learning media expert, there are some evaluation and suggestion for fixing our product. The expert evaluated that the music score and direction in this product is not clear enough. Some music score in this product is difficult to read because of the size. For information, our product is not optimized well for the small mobile device (less than 5-inch screen size). So, the user will have an extra attempt to read the music score. The expert suggests adding some information to this game such as instructions of use item or button inside the game. The expert found that some button somewhat confusing, especially the okay button. There is a no different button for okay command and the boat ride button, so the expert suggests to make a difference between this button. But overall, this game is excellent to use in music learning process, especially for Indonesia’s traditional song learning. Then, the part of product improvement shows in Figure 2 below.

In Figure 5, controller button repaired. Controller button can hide the main controller by touched it while the song played. We also change music score to the bigger one so that player can read clearly. Rule of thirds terms also fixed to arrange the better picture direction (Aswin & Muttaqin, 2014).

There are some evaluations and suggestions from the music art learning expert for this product. The music score needs improvement especially for the notes that shown in this game. The improvement focused on music notes with a slash. The expert noted that the explanations of slash in the music score must be clear and use the standard terms. In additions, the expert noted there should be clear instructions when the song played, for example adding gradations color like in karaoke lyrics to make it easier for the student.
to read the music notes. Moreover, adding metronome to the song instrument is a better choice to make it easier to learn. From the music art learning expert, this game got a perfect score because the expert assumed that this game is very educational and the innovation in the music art learning process. The product improvement based on expert evaluation and suggestion shows in Figure 3.

Based on language expert judgment, this game is good. There are some evaluations and suggestion for this product. The sentences which shown in this game should
separate into two or three parts. The expert told that the sentences amount is too much. This condition will make the player feel bored. Use sentences in Bahasa should be shown as simple as possible but not decreasing the meaning. In addition, the dialogue text which displayed in the game should present well. The expert reminds about the term of the use of foreign words in Bahasa. Foreign words in this game must write in italic style. Capitalize, and regular words also must be different. There is no necessary improvement in dialogue part because the expert gives the high score in this part. Based on expert evaluations and suggestions, the product improvement shows in Figure 4.

![Figure 4: Product Improvement Based on Expert Evaluation.](image)

In Table 2, there is a score for this product based on expert judgment. In the media part, display of visual communication and software utilization got a score percentage above 80%. Display of visual communication represents the attractiveness of learning media to attract student’s attention. Color and image composition are essential things to make digital learning media eye-catching (Hendrawan et al., 2012; Adinoto, 2015; Febriyani & Donna, 2016). Adding pictures, sound, and animation in this product can interest students to focus on the storyline of the game. This game which developed with adding conversation and built in the mobile devices also support the student to establish comprehensive reading skills (Kim & Lee, 2016).

From the material coverage which shown in Table 2, this game presents the music art material very well. The perfect score that has given by expert is a proof. The material in this game consists of the basics of learning music score and how to learn Indonesia’s traditional songs. The basics of learning music score include how to read the music notes.
and beats in music. This material is a primary material for elementary students before they learn about the complete music score. In the music learning process, the theory is an important thing to be mastered by the student (Amriyeni et al., 2013). This product displayed Indonesia's traditional music score from the biggest island of Indonesia as a representative form of the richness of Indonesia traditional songs. Adding songs from each Indonesia's biggest island improve student's knowledge about songs from various provinces in Indonesia. This product is kind of novelty in this technology era as a form of application of a useful model of art education (Utomo, 2016).

Based on expert judgment score, this game is worthy to use as learning media. Games that provided in the role-playing game genre is worthy to engage the learning process. The study before, told the same thing with this study which RPG game can use and increase student interest in the learning process (Erwin & Florena, 2013; Asriyatun & Nugroho, 2014; Sari et al., 2014; Hartanto et al., 2016; Maharani et al., 2016; Ningsih et al., 2016; Hermawan et al., 2017).

5. Result and Conclusion

The lack of student interest and knowledge about Indonesia's traditional songs can make the existence of Indonesia's traditional song evicted. We know that today children generation prefers to listen to modern songs. So, music art learning process in the elementary school is urgently needed to remind and learn about Indonesia's traditional song. To promote student's interest in Indonesia's traditional song, we need something new and innovative. As an innovation, mobile learning media for music art learning is necessary based on student's habit who often play mobile games in their daily life. Music art learning media can build into RPG games that to attract student interest. Based on expert judgment validation's score, the music art learning media called “Lagu Nusantara” is worthy of supporting the student to learn about the basic of music learning and Indonesia's traditional songs. The average score is 3.6 for media representation, 4 for music learning material that presented, and 3.3 for the use of language. The worthiness of this media is above 90% (precisely 90.83%). In conclusion, this RPG game can use by teacher or students to promote music art learning process, especially about Indonesia's traditional song.
