It gives us great pleasure at Dubai Diabetes and Endocrinology Journal (DDE) to start a new chapter with our new publisher, Knowledge E. This change certainly confirms our unwavering dedication to offering the most up-to-date and trustworthy information on managing diabetes.

Change can be stressful [1], however, it also presents a chance for development.

We look forward to sustaining DDE's core values as a reliable resource for the diabetes and endocrine community, with the support of our new publisher and our esteemed editorial staff. Our commitment to strict peer review and maintaining the highest standards for the assessment of manuscripts will remain crucial.

A Seamless Transition for Authors

The change in publisher should be a smooth transition for all as the peer-review process you're familiar with will remain the same. Authors should anticipate that their submissions will be assessed according to the predetermined standards specified in our author guidelines. If necessary, these principles may be slightly modified, and any modifications will be communicated clearly. To ensure a smooth transition for all of our contributors, the submission procedure itself will also continue unhindered.

We are confident that our collaboration with Knowledge E offers great room for progress and we're excited to keep helping our writers, editors, and readers. We are committed to continuing to offer a forum for the dissemination of significant research that increases our understanding of diabetes and endocrinology as we set out on this new path.

We appreciate your feedback throughout this transition as we know that it might take some time to adjust to change. Do not hesitate to get in touch if you have any queries or recommendations. We are dedicated to providing all of our readers with a seamless and enjoyable experience.

Let's empower one another and take charge of managing our diabetes together!
